DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, claims 1-8, in the reply filed on 9/9/05 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Tanabe et al. (US 6469320).

Regarding claim 1, Tanabe discloses a semiconductor light-emitting element (Fig. 1) that is made by using the lateral growth function of semiconductor crystal while providing an ELO mask (3, Figs. 1-2) on a crystal growth surface of a crystal growth substrate, wherein at least part of a sidewall (3a, Figs. 1-2) of the ELO mask is provided with an inclined plane that is inclined to the crystal growth surface such that the

semiconductor crystal to be formed on the ELO mask substantially has no void (Figs. 1-2 and Cols. 7-8).

Regarding claim 2, Tanabe further discloses wherein at least part of the inclined plane is curved (3, Fig. 2 *note: realization of mask 3 would incur rounded or curved portions of the inclined sidewall due to standard semiconductor etching processes*)

Regarding claim 3, Tanabe further discloses wherein the shape of ELO mask (3, Fig. 2) in cross section vertical to the crystal growth surface is formed nearly semicircular, nearly semi-elliptic or partially either of these shapes (Fig. 2).

Regarding claim 4, Tanabe further discloses wherein the shape of ELO mask (3, Fig. 2) in cross section vertical to the crystal growth surface is formed nearly isosceles triangular or nearly isosceles trapezoidal with flat top (Fig. 2).

Regarding claim 5, Tanabe further discloses wherein the shape of ELO mask on the crystal growth surface is formed like a spot or a nearly stripe (Figs. 6-8).

Regarding claim 6, Tanabe further discloses wherein the crystal growth substrate is of sapphire (Col. 7, lines 55-60).

Regarding claim 7, Tanabe further discloses wherein the semiconductor crystal is of $\text{Al}_x\text{Ga}_{1-x}\text{N}$, x from 0-1 (Col. 9).

Regarding claim 8, Tanabe further discloses wherein: the semiconductor light emitting element is a flip-chip type LED (Col. 1, lines: 5-20) the refractive index of the ELO mask is set to be greater than that of the crystal growth substrate and smaller than that of the semiconductor crystal (Cols. 7-8, *material properties*).
